

Tkinter Project - Shop

Shop

Users

Bank

A separate window intended to hold a users bank. This will contain information about the users current assets and eventually the latest transactions.

Inventory

The inventory will hold the items bought from the shop. It will also display the value of each item, the amount of each item.

Profile

The profile will show information about the user such as name, bank value and password.

Store

Sorting system

The items can be sorted by name, (A-Z) and price, (lowest-highest and highest-lowest).

Items

Every item has a price and a stock. When the item is out of stock it will not be available for purchase. If the user does not have enough money for a purchase the item will also be shown as unavailable.
